

Formel „E“ is now driving in Altheim too

Sustainability, environmental protection and conservation of resources are key terms of HA-BE's corporate philosophy. We therefore decided in 2014 to enhance our vehicle fleet with an electrically powered car – a BMW i3. The car is used primarily at HA-BE for internal trips between the two plants and has proven highly successful as a company car in every aspect.

While driving this vehicle, no local CO2 emissions are produced whatsoever. Nevertheless, consistent sustainability also means that all CO2 emissions produced outside of the car must be reduced or avoided, i.e. already in the production of the car, the choice of perfectly suited or recycled materials - ideally renewable resources - was taken into consideration. The carbon footprint is better still if the car is charged with "green power".

In using an electric car, HA-BE is well on the way to sustainable mobility...
